

## **Instructions for Applying Fabric Waterproofing and Mold Killer:**

- First, ensure the fabric or item you are waterproofing is clean, dry and free of dust, mold and dirt. Fabric waterproofing is designed to bond to the surface of the material to be proofed. Please ensure prior waterproofings are removed prior to applying Tent Magic, as this will impede the performance of the waterproofing or could negate the treatment completely. Tent Magic waterproofers are designed to bond to the fabric directly. If the item has been previously treated with an acid or bleach cleaner (such as 30 Seconds), you must have regard to the integrity of the weave of the fabric; the weave can expand or open up and the fabric will not be able to be waterproofed with integrity.
- Shake Tent Magic and Tent Magic Poly prior to opening the container. Brush or roller straight on to the fabric or item to be treated and allow to dry. Pay particular attention to the seams.
- For Tent Magic and Tent Magic Poly, these are external proofers. You only need to apply one coat externally. If the tent or item is very old and very worn, the integrity of the weave may be compromised and in these cases, we recommend you replace the item or the tent.
- It is best to have your tent erected to waterproof it properly and to apply any mold killers. For boat covers and biminis, it is best to proof or treat when the cover is on or the bimini is up. Horse covers can be proofed over a line or frame, or other similar structure.
- If your tent is moldy or dirty, erect your tent so it is under tension (taut), hose off debris (such as sap, pollen, dirt, etc) so that it's clean and ready for water proofing.
- Once cleaned and treated for black mold stain, the mold infestation will be killed but the staining will still be visible. The staining will haze off in time with the assistance of UV/sunlight. This will reduce the time needed for the staining marks to disappear.
- For use on horse covers (Tent Magic Ultra), you must first consider how many layers the cover has – for example the top layer, bottom layer and the blanketing material/wadding layer in between. As Ultra is sprayed on, it envelops all strands of fibre on the cover, and will therefore be absorbed in part by the thermal layer. This adds to the fabric's overall density and will reduce the square metre coverage significantly. Please contact us if you have any queries surrounding this.
- Storage: Store in the container provided in a cool, dry place out of the sun. Shelf life is approximately two years from purchase.
- Apply Tent Magic in a well-ventilated area only. Regular applications will maintain your tent or tarp or awnings and ensure against rot mildew and water damage.
- **CAUTION:** Keep out of reach of children. If swallowed do not induce vomiting. Wash out mouth. Seek medical advice. If on skin wash thoroughly with soap for 5 minutes. EYE Irritant – if in eyes, flush continuously for 15 minutes. If inhaled remove from area to fresh air. If symptoms persist in all cases seek medical advice.
